

When high-end material technology takes your breath away

D9 BREATHABLE

Front-zipped Quad-Lam breathable membrane Drysuit

The new D9 Breathable Drysuit is Waterproof's answer to the growing demand for a light traveler, tropical and snorkeling drysuit. Its extremely light and breathable properties add to the comfort of the user.

The light quad layer fabric with the breathable membrane in combination with ultra-sonic welded socks makes the suit easy to fold and transport. It weighs only 2 kg - valves included. But even with adequate tear, puncture and wear resistance this is a suit designed for more delicate diving. It is not constructed for advanced high tech or wreck diving, for this Waterproof has better suited hard core diving models.

The suit is equipped with integrated suspenders and together with the crotch strap they form a telescope waist. Thanks to this telescope waist construction, the ergonomics of the suit give a feeling of ordinary cloth. It also allows the use by persons of different heights. No need for individual suits for each user. The D9 is perfect for tropical diving or snorkeling in colder waters.

The suit can be ordered with a premounted oral inflator for snorkeling, instead of the inlet valve/hose.

Included:
Suspenders
Low pressure hose
Ventilated bag
